Validating our results

- To validate our results (that is, to check the CRA index and the validity of our output models), please use Start -> Command Prompt to open a command prompt.

  - **Hint:** Each output model contains its precomputed CRA as part of its file name, e.g. 16_05_16-021426-TTC_InputRDG_A-**cra_3.0.**xmi

- A typical call of the Validation involves the following commands:

  ```
  > C:
  ```

  ```
  > cd C:\eclipse-modeling-mars-2-win32\ws_ttc\ttc16-
  solution\results\crossover_20it\output_models\TTC_InputRDG_A\runConf
  ig_0
  ```

  ```
  > java -jar "C:\CRAIndexCalculator.jar" 16_05_16-021426-
  TTC_InputRDG_A-cra_3.0.xmi
  ```
